

ZDÁPEČKY, a.s.

Electric multi-turn actuators

MODACT MONED

Type No. 52 030 - 52 036.xxx0NED

MODACT MOPED

Type No. 52 030 - 52 036.xxx0PED

CERTIFICATE

The TÜV CERT Certification Body
for QM systems of RWTÜV Systems GmbH

hereby certifies in accordance with TÜV CERT
procedure that

ZPA Pečky, a.s.
Třída 5. května 166
289 11 Pečky
Czech republic

has established and applies a quality system for

Development and production of electric actuators,
enclosures and sheet metal production

An audit was performed, Report No. 624362

Proof has been furnished that the requirements according to

ISO 9001 : 2000 / EN ISO 9001 : 2000

are fulfilled. The certificate is valid until **11. November 2006**

Certificate Registration No. **041005161/000-E01**

The company has been certified since **1995**

Essen, 14.11.2003

RWTÜV

TÜV CERT Certification Body
of RWTÜV Systems GmbH

A handwritten signature in black ink, appearing to read "Kubášek".

APPLICATION

MODACT MONED; MOPED actuators have been specially designed for adjustment of fittings and other devices for which they are suitable due to their properties and reversing rotary motion in particular. Other way of application shall be consulted with producer. These actuators can be used in remote control circuits.

When fitted with a current transmitter, they can be used even in automatic control circuits operating in duty S4 - 25 %; 1200h⁻¹.

OPERATING CONDITIONS

The MODACT MONED; MOPED actuators should withstand the effect of operating conditions and external influences, Classes AA7, AB7, AC1, AD5, AE5, AF5, AG2, AH2, AK2, AL2, AM2, AN2, AP3, BA3, BP3 and BC3, according to ČSN Standard 33 2000-3. If the actuator is to be installed in the open-air space it should be provided with light roofing for protection against the effects of atmospheric factors. The roofing should overhang the outline of actuator at least by 10 cm, up to high 20 ÷ 30 cm.

If the actuator is used at a location with an ambient temperature under -10°C and/or relative humidity above 80 %, at a sheltered location, or in the tropical atmosphere, the anti-condensation heater which has been built in all actuators, should be always used. One or both where is necessary.

Installation of the actuator at a location with incombustible and non-conducting dust is possible only if this has no adverse effect on their function. In this case is necessary to thoroughly adhere ČSN Standard 34 3205. It is advisable to remove dust whenever the layer of dust becomes as thick as about 1 mm.

Notes:

A sheltered location is considered a space where atmospheric precipitations are prevented from falling at an angle of up to 60° from the vertical.

The location of the electric motor should be such that cooling air free access to the motor and no heated up blown-out air is drawn in the motor again. For air inlet, the minimum distance from the wall is 40 mm. Therefore, the space in which the motor is located should be sufficiently large, clean and ventilated.

Classes of external influences

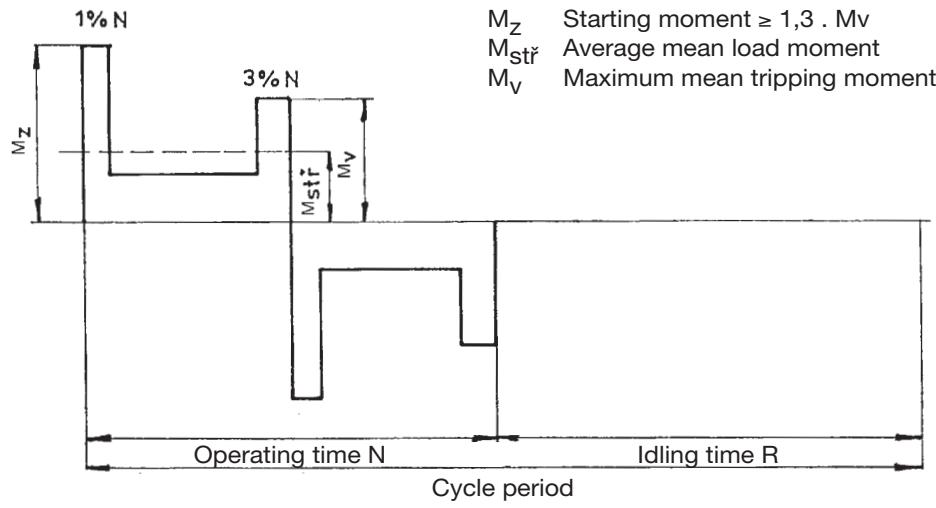

Basic characteristics - as extracted from CSN Standard 33 2000-3 (mod. IEC 364-3:1993).

- 1) AA7 - Simultaneous effect of ambient temperature of - 25 °C to + 55 °C with relative humidity from 10 % upwards
- 2) AB7 - Ambient temperature to Point 1); minimum relative humidity 10%, maximum relative humidity 100% with condensation
- 3) AC1 - Altitude ≤ 2,000 m above sea level
- 4) AD5 - Splashing water in all directions
- 5) AE5 - Small dust content of air; mean layers of dust; daily dust fall more than 35 mg/m², but not exceeding 350 mg/m²
- 6) AF2 - Corroding atmosphere and pollutants; the presence of corroding pollutants is significant.
- 7) AG2 - Average mechanical stress; in current industrial plants
- 8) AH2 - Medium vibrations; in current industrial plants
- 9) AK2 - Serious risk of growth of vegetation and moulds
- 10) AL2 - Serious danger of the occurrence of animals (insects, birds, small animals)
- 11) AM2 - Harmful effect of escaping vagabond currents
- 12) AN2 - Medium solar radiation with intensities > 500 W/m² and ≤ 700 W/m²
- 13) AP3 - Medium seismic effects; acceleration > 300 Gal ≤ 600 Gal
- 14) BA4 - Personal abilities; instructed people
- 15) BC3 - Frequent contact with the earth potential; persons coming frequently into contact with „live“ parts or standing on a conducting base

OPERATION MODE

According to ČSN EN 60 034-1, actuators can be operated in S2 load category. The operation time at +50°C shall be 10 minutes, the mean load moment value shall be below or equal to 60 per cent of the maximum switch off moment (Mv).

According to ČSN EN 60 034-1 (35 0000), the actuators can also be operated in the S4 mode, the maximum number of switching actions in automatic control mode is 1200 actions per hour (the course of load is shown in the picture). The average mean load moment at load factor of 25 per cent and 50°C shall not exceed 40 per cent of the maximum tripping moment (M_v).

TECHNICAL PARAMETERS

Basic technical parameters

The basic technical parameters are given in Tab.1. (page 21.).

Operation parameters

Supply voltage of electric motor	3x230/400V, (+10 %, -15 %) /50 Hz; (or as shown on the motor rating plate)
Working temperatures	-25°C to +55°C, other consult with producer
Enclosure protection	- IP 55 type MONED - IP 67 type MOPED
Noise:	The maximum acoustic pressure level A is 85 dB (A). The maximum acoustic power level A is 95 dB (A).

Operation position

Operational position of MODACT® actuators is arbitrary, it is limited only by slant of motor axis – max 15° **under** horizontal level. Reason is presentation of reducing of service life of rubber seal of motor spindle by relevant detritus, or impurities in oil filling.

Is necessary, if the electro motor is **above** horizontal level, to fill in oil filling as, that lubrication of motor pinion gear is assured.

Technical parameters of electronics

Power supply

Line voltage:	230 V / 50Hz, 3 W
Fuse:	200 mA
Backup:	BAT1 Lithium battery 3,6 V / 7,2 Ah (minimum period of backup of position is 800 days) BAT2 Lithium battery 3,6 V / 16 Ah (minimum period of backup of position is 1850 days)

Output signal

Analog:	Position signal of actuator 0/4÷20 mA (uplink), or 20-0/4 mA (downlink)
Two-valued:	Seven relay outputs (switch contact 250 V / 8A~)
relay MO, MZ	switch over at reach of adjusted torque
relay PO, PZ	switch over at reach of adjusted position
relay SO, SZ	switch over at reach of adjusted position
relay READY	signaling of failure

Adjustable parameters

- tripping torques MO, MZ
- zone of torque blocking
- max. period of torque blocking
- positions PO, PZ

- positions SO, SZ
- relay function MO,MZ (tripping of torque, or torque + position)
- type of current output
- parameters of single-step mode

All these parameters are adjustable per service computer as well as push-buttons SW1, SW2.

Communications

- Adjusting of parameters:
- per computer with serial port RS232 with bit rate 9600 Bd
 - per push-buttons, with signaling of LED diodes and LCD display

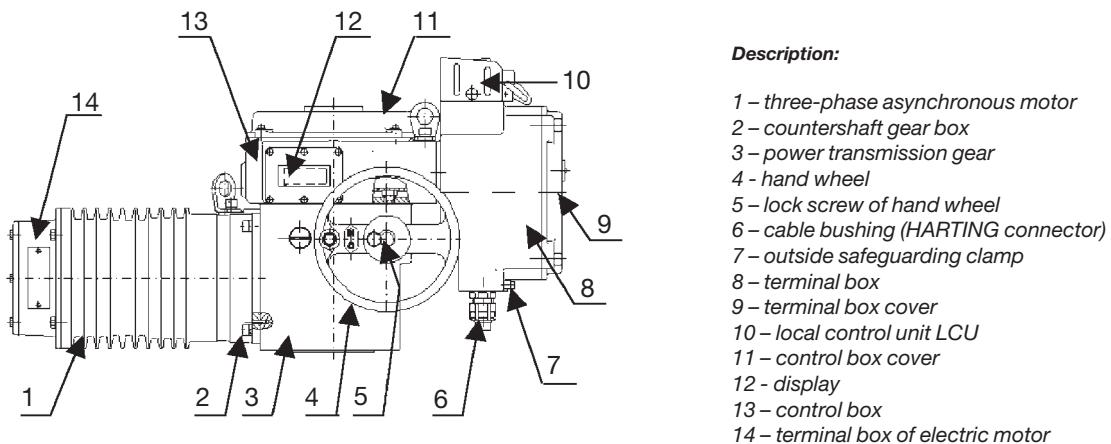

Initialization

	Tripping of torque relays
Stroke of actuator:	10 revolutions
PZ:	0 %
PO	100 %
SZ	1 %
SO	99 %
Blocking close	5 %
Blocking open	95 %
Time of torque blocking	1 sec
Blocking window	off
Single-step mode off	
	MZ by torque and position 0 %
	MO by torque and position 100 %

DESCRIPTION OF ACTUATOR

General arrangement

In respect of their basic connecting dimensions, the actuators have been engineered for direct mounting to the fitting. The connection of the actuator to the fitting is provided by a flange, according to ČSN EN ISO 5210 (13 3090). For transmission of the output shaft motion of the actuator to the fitting, the actuator is provided with a Shape C or D coupling to ČSN 18 6314 (according to DIN 3338) or a Shape E coupling to ČSN 18 6314; B3 according to ČSN EN ISO 5210 (13 3090). When adapters are used (which can be supplied with the equipment), the connecting dimensions, Shape A or B1, to ČSN EN ISO 5210 (13 3090) can be obtained. These adapters are mounted between the actuator and the fitting.

Pic. 1 - **Actuator assembly**

For MONED brand actuators the electric motors provided with an IP 55 protective enclosure are utilized and for MOPED brand actuators the electric motors provided with an IP67 protective enclosure are utilized. The whole actuator will then have a protective enclosure depending on the type of electric motor used.

DMS Electronic System has replaced the electromechanical control panel. The system monitors the position and the moment, and, depending on the set parameters, it controls an output relay and the remote position indication.

DMS is composed of a control unit with a LCD display, a position sensor and a moment sensor. Optionally, the system may be supplemented by an analogue output module. The control unit with an optional position transmitter form one compact module, which has been situated in actuator's terminal box. Sensors have been installed in the control cubicle.

Servomotor service parameters may be set up by means of push buttons on the control unit, which has been provided with response monitoring on LED control lights, or on the display. In the course of operation, the display will show information about the position, and, in the event of a failure incidence it will show the failure numerical code. To facilitate handling the actuator in setting up the parameters, or in case of a defect on a valve, a set of BMO local control unit change-over switches will be offered as optional accessories.

Electrical Outfit

The electrical outfit consists of electronics power supply circuit and control circuits, which have been connected with relay contacts. The power supply has been connected to the control unit terminal board and it is protected using a 200mA fuse. External control circuits will be connected to the second part of the terminal board (it may be distinguished by terminal connectors type).

A thermal resistance and optional BMO are also connected to the terminal board.

Inlets from external circuits and power supply shall be led to the actuator's terminal board through cable bushings, or they will be connected using Harting connector.

BMO Local Control Unit

A set of two change-over switches, one of which will switch over the control voltage from external circuits to the second change-over switch, which controls directly the motor contactors. See examples of connection in the attachment. BMO represents optional accessories.

DMS Control Electronics

Function Description

DMS Electronic System is destined for multi-turn actuators operation control in the mechanical unit operating mode; it ensures a safe actuator disconnection at the moment of reaching the required position, or a specified torque limit on the shaft. The relay contacts will take over the function of mechanically controlled microswitches for motor tripping and for position signalling.

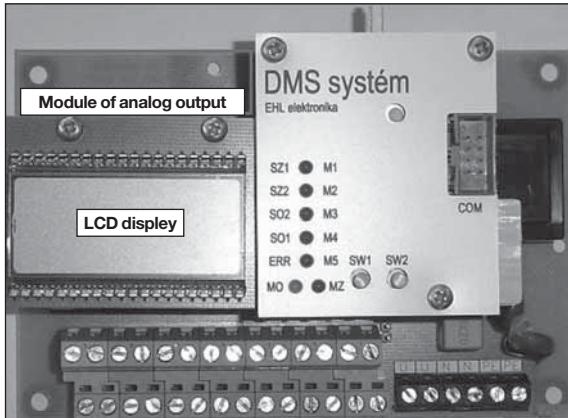

A standby battery forms part of the system. The battery enables to preserve information on the position even in the event of a fall-out loss of power supply.

It is possible to order a battery with a 7.6Ahours or 16Ahours capacity as an option.

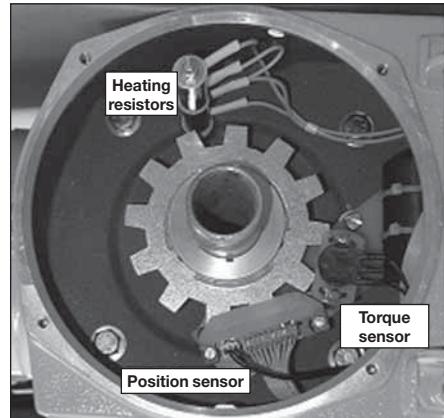

Actuator parameters are programmable.

DMS Composition

DMS System is composed of a control unit with a LCD display, a position sensor and a moment sensor. Optionally, the system may be supplemented by an analogue position transmitter module. The control unit with a display and an eventual position transmitter form together one compact module, which has been installed in actuator's terminal box. The control box has been fitted with position and moment sensors unit.

Pic. 2 - **Control module**

Pic. 3 - **Position and torque sensors**

Manual Control

Actuator's output shaft may be adjusted also manually by means of a hand wheel. By rotating the hand wheel clockwise the valve will close (a left-hand thread on the valve has been envisaged.). Prior to the commencement of manual control, it will be necessary to loosen the locking bolt (Fig. 1), so that the hand wheel may rotate freely. Upon adjusting the output shaft to the required position, it will be necessary to retighten the locking bolt again into the interlocking flange opening.

Notes:-

1) Rated torque for S2 operation equals to 60% of max. tripping torque
 Rated torque for S4 operation equals to 40% of max. tripping torque

2) Weight dates are valid only for designs with C.D.E attachment.

3) Actuators with Type No. 52 030 can be done with attachments of actuators with Type No. 52 031, but with &d6 28, shape C.

4) Basic working stroke - Type No. 52 030 - 52 035: 2 - 1350 turns;
Type No. 52 036: 1 - 680 turns.

Notes:

1) Rated torque for S2 operation equals to 60% of max. tripping torque
 Rated torque for S4 operation equals to 40% of max. tripping torque

2) Weight dates are valid only for designs with C,D,E attachment.

3) Actuators with Type No. 52 030 can be done with attachments of actuators with Type No. 52 031, but with ɴ 28, shape C.

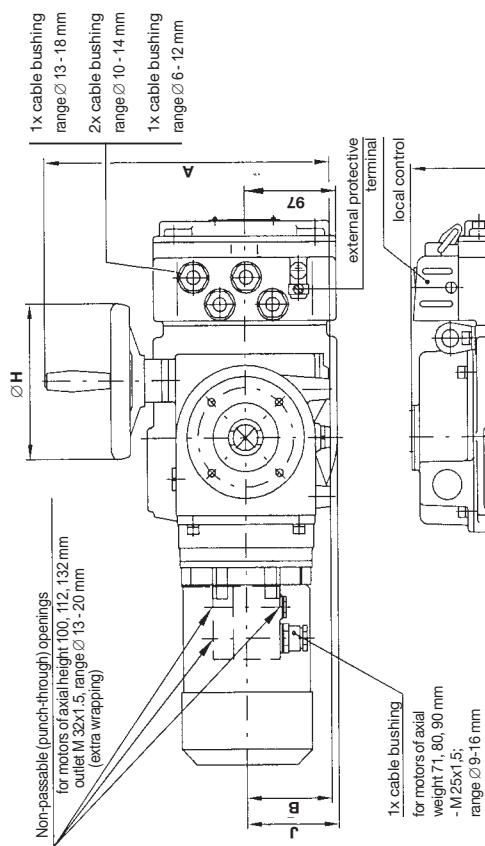

4) Basic working stroke - Type No. 52 030 - 52 035: 2 - 1350 turns;
 Type No. 52 036: 1 - 680 turns.

Tab. 2 - Signification of additional letters and numbers

Chosen numbers or letters replace "x" sign on the 6th and 7th position of type number in Tab. 1 or Tab 1a.

Position transmitter NO	BAT 1 BAT 2	2 6 3 8
Position transmitter YES	BAT 1 BAT 2	C G D H
Notes:		
1) Types of batteries are mentioned in chapter Technical parameters of electronics.		
2) Connector HARTING ensures full electric connection of actuator. ZPA Pečky, Co. Ltd. also supplies a counterpart for the cable. <i>In order to connect the cable to this counterpart it is necessary to use crimping pliers (supplied by HARTING Company on Order No. 0999 000 0021; e-mail: info@contex.cz).</i>

MODACT MONED and MOPED Electric Actuators

An Example of External Connection

- change-over switch control, BMO, 230V control voltage
(MO, MZ relays, moment and position tripping)

Development, production and services of electric actuators and switchboards.
Top-quality sheet-metal processing (TRUMPF equipment), powder paint shop.

SURVEY OF PRODUCED ACTUATORS

KP Mini

Electric rotary (90°) actuators (up to 30 Nm)

Modact MOK, MOK-P, MOK-P EEx

Electric rotary (90°) actuators for ball valves and flaps

Modact MON, MONED, MOPED

Electric rotary multi-turn actuators

Modact MO EEx

Explosion proof electric multi-turn actuators

Modact MOA

Electric rotary (90°) actuators for nuclear power stations
application outside containment

Modact MOA OC

Electric multi-turn actuators for nuclear power stations
application inside containment

Modact Variant MPR

Electric rotary (160°) lever actuators with a variable output speed

Modact Konstant MPS

Electric rotary (160°) lever actuators with a constant output speed

Modact MTN

Electric linear thrust actuators with a constant output speed
